

# Rifle M100 Staple Gun

- ### APPLICATIONS
- Construction
  - Highway
  - Landscaping
  - Slope
  - Channel
  - Shoreline

The fast and easy way to secure and staple down erosion control blankets, geotextiles, sod and landscape fabrics for construction, highway or landscaping projects. Made from laser-cut, welded precision steel parts, this staple gun will help increase productivity to an average of 12,000 staples per day. It saves time, reduces labour costs and back strain. The high-performance Rifle Staple Guns works on soft, cold or hard ground, as well rocky soil.

The mechanical device drives and guides the staple into the ground, preventing the staple from bending out of shape. Once installed, the staple holds the blanket in place and resists wind forces from pulling up the blanket.

Wearable parts are interchangeable, so you can easily replace them as needed over time. Replacement parts are readily available.

### FEATURES

- Most durable staple gun on the market
- Handcrafted, durable, hardened steel construction
- Adjustable chamber for precise staple delivery
- Easy to use and maintain – replacement parts available

### Rifle Staple Gun & Factor T Staples Specifications

Rifle Staple Gun Packaging Properties	Unit	M100
Weight	kg	13
Factor T Staples (Box of 1000) Weight	kg	12
