

ES-B-1000L Instruction for Use

Bio-Based Dust Control Solution

EROSEAL Bio is a bio-based, plant-derived dust suppressant agent, specifically developed for long-term dust control with just a single application. It is designed to provide effective dust suppression at sites like mines, road maintenance, and construction areas by adhering to dust particles, making them “sticky” and preventing them from becoming airborne even in challenging weather and heavy traffic conditions.

Dilution Ratios

- 1:10 for highly dusty roads and areas
- 1:50 for general dust suppression

NOTE: Dilution may vary depending on dust particle size.

Application Rate

Suggested at 1L of diluted product per square meter, based on specific conditions.

Performance

EROSEAL Bio provides long-term dust control with a single application. Regular applications will form a semi-permanent protective layer.

Equipment Compatibility

Safe for use with rubber gaskets, seals, and all metal and non-metal parts. It can be applied with standard road watering equipment, even near sensitive machinery without causing damage.

Net Weight

1,000 kg

Unit of Measure

1,000 Litres

Size (W x H x D)

1,000 x 1,160 x 1,200mm
